

FMIS 5.0 Known Issues and Related User Scenarios

Updated as of August 21st, 2014

KI #	Functionality Area	Description	User Scenario	Status
KI001	Projects	Over obligation & Over expenditure validation routines are not performing the checks correctly for certain scenarios and as a result Over obligation & Over Expenditure Warning & error messages are displayed by the system	Modifying a project and then applying signatures to the project.	Fix in Progress
KI002	Data Conversion	The user defined fields data conversion has an issue related to data not being populated for the first defined field	When viewing information for some projects, the user defined fields value could be incorrect.	Fix in Progress
KI003	Projects	When a project is reopened, the Change Log is not capturing the Reopen Action	When a closed project is reopened, the Change Log section doesn't show the change in the Project Action	Fix in Progress
KI004	Projects/EDS	Several FMIS4 3-digit Urban Ids conflicted with the new Census Urban Ids. Development team had to migrate all FMIS4 urban Ids into FMIS5 in order to load all the Projects data. As a result of Urban Id conflict, the new Urban Codes have not been loaded into the system.	When adding locations in FMIS5, the Urbanized Area drop-down list will currently display only the FMIS4 Urban codes. When submitting data via EDS with new urban codes in the Locations tag, the system will not be able to locate the urban code and hence will report an error.	Fix in Progress
KI005	EDS	The Project Status is not correctly set when signatures are supplied as part of the XML file.	Sign and Unsign EDS scenarios	Fix in Progress

KI006	EDS	Several XML Schema validation errors reported. The development team is working on adding more details to the XSD as this will help the states to validate against the XSD before submitting the file for processing. This will drastically reduce the number of XML Schema errors reported currently.	Add/Modify Project	Fix in Progress
KI007	Projects/EDS	Structure Number Validations is being addressed to align it with the FMIS4 validation. Until it's addressed, the system could provide an Invalid Structure Number error when entering a bridge number.	When a structure number is added to a location.	Fix in Progress
KI008	General	Timeout window warning pops up even if the user has been active in the application	The timeout warning window pops up even though the user is active and the user had to click Stay Active to continue with the session	Fix in Progress
